

GUIDE 1

Service overview and eligibility

How Kigali HomeTech supports safe installation, inspection, and repair of eligible appliances.

Installation service

Setup for selected televisions, refrigerators, washing machines, cookers, and other eligible appliances.

Repair service

Diagnosis and repair for supported products when technicians and compatible parts are available.

Who can request service

- Customers with a Kigali HomeTech receipt, order number, or other verifiable proof of purchase.
- Customers with an eligible product inside Kigali or another location accepted during booking.
- Businesses may book multiple units, but they must provide an equipment list and an on-site contact.

What is included

- Installation: placement, standard connection, basic safety checks, start-up test, and a short user demonstration.
- Repair: intake check, diagnosis, written estimate when payment is required, approved repair, and functional testing.
- A service record containing the product, serial number, work completed, technician name, and completion date.

Important boundaries

- Building construction, major electrical rewiring, plumbing changes, wall reinforcement, and gas-line work are not standard installation services.
- A technician may stop work when the site is unsafe, the product is damaged, or required connections do not meet safety standards.
- Manufacturer warranty decisions remain subject to the Warranty Policy; booking a repair does not automatically confirm free warranty coverage.

Quick rule: confirm the product, location, access conditions, and expected charges before the appointment.

GUIDE 2

Booking, timing, and service charges

What to provide, when to expect a visit, and how charges are approved.

Information required when booking

- Customer name, phone number, delivery or service address, and preferred appointment time.
- Product name, model, serial number when available, purchase date, and order or receipt number.
- For repairs: a clear description of the problem, when it started, and any error message, sound, smell, or visible damage.
- For installation: photographs of the intended location may be requested before confirmation.

Appointment timing

Kigali HomeTech normally confirms a complete booking request within 2 business hours. Standard appointments are usually offered within 1 to 3 business days. Same-day service may be offered when a technician is available, but it is not guaranteed.

Charge	How it works	Approval
Inspection fee	A RWF 15,000 inspection fee may apply to an out-of-warranty home visit within Kigali.	Confirmed before dispatch.
Installation fee	Depends on product type, accessories, mounting, and site conditions.	Quoted before work begins.
Repair estimate	Shows labour, parts, transport, and applicable taxes.	Customer approval is required.
Outside Kigali	A travel charge may be added after the destination is reviewed.	Confirmed during booking.

Payments and receipts

- Accepted payment methods follow the current Frequently Asked Questions document and the payment options shown on the official invoice.
- Do not pay a technician to a personal account. Request an official Kigali HomeTech receipt for every payment.
- When an inspection fee is credited toward an approved repair, the credit must appear on the final invoice.

GUIDE 3

Preparing for installation

A practical checklist that helps the technician complete the work safely and on time.

Before the technician arrives

- Clear the installation area and provide safe access from the entrance to the final product location.
- Ensure an adult customer representative is present to approve placement and sign the service record.
- Keep children and pets away from the work area.
- Confirm that electricity, water, drainage, ventilation, and wall strength meet the product manual requirements.
- Keep the product, supplied accessories, proof of purchase, and any separately purchased mounting kit available.

Standard installation sequence

1. The technician confirms the model, serial number, accessories, and requested location.
2. The technician inspects the product and site for visible damage or unsafe conditions.
3. The customer approves any additional work or charge before it starts.
4. The technician completes standard connections and follows the product manual.
5. The product is tested, basic controls are demonstrated, and the service record is signed.

Product	Customer preparation
Refrigerator	Provide a level, ventilated location near a grounded outlet. Follow the product manual before switching it on after transport.
Washing machine	Provide suitable water inlet, drainage, a level floor, and a grounded outlet.
Television	Confirm viewing position, cable route, wall type, and an approved mounting bracket when wall mounting is requested.
Cooker	Provide required clearances and approved electrical or gas connections. Specialist gas work is not included unless explicitly arranged.

When installation must stop

Work will pause if the site has exposed wiring, water leakage, unstable furniture or walls, blocked ventilation, a damaged product, missing required parts, or another immediate safety concern. The technician records the reason and explains what must be corrected before a new appointment.

GUIDE 4

Repair and diagnosis workflow

How a reported fault moves from intake to an approved and tested repair.

Step-by-step repair process

- 1. Intake: staff record the customer, product, serial number, proof of purchase, accessories received, and reported fault.
- 2. Diagnosis: a technician checks the product and determines whether the issue is covered by warranty or requires a paid estimate.
- 3. Decision: the customer receives the diagnosis, expected cost, parts status, and estimated completion date.
- 4. Approval: paid work begins only after the customer approves the estimate. No response for 10 business days may pause the job.
- 5. Repair and test: approved work is completed and the main reported fault is tested.
- 6. Collection or delivery: the customer checks the product and receives the final service record and invoice.

Expected timing

A diagnostic update is normally provided within 2 business days after the product is received. Standard repairs are usually completed within 3 to 7 business days after approval when parts are available. Special-order parts may add approximately 5 to 15 business days. These are estimates, not guarantees.

Customer approval protects you

The estimate should identify labour, parts, transport, taxes, and whether the inspection fee is credited.

Parts availability affects timing

Staff should communicate a revised estimate if a required part is unavailable or delayed.

Data and accessories

- Customers must back up and remove personal data from smart devices before service whenever possible.
- Kigali HomeTech is not responsible for data loss caused by a necessary reset, storage failure, or a fault already present in the device.
- Only accessories recorded on the intake form are treated as received with the product.
- Removed parts are handled according to safety and waste rules; customers should request return of an eligible removed part before repair begins.

GUIDE 5

Changes, after-service support, and escalation

What happens when plans change and how customers can report a continuing problem.

Rescheduling and missed visits

- Request a change at least 4 hours before the appointment whenever possible.
- A missed visit may require a new booking and an additional transport charge when the technician arrived at the confirmed address.
- Kigali HomeTech may reschedule because of severe weather, unsafe travel, technician illness, or unavailable parts and should notify the customer promptly.

After-service support

Report the same installation workmanship issue within 14 calendar days of completion. Kigali HomeTech will review the service record and may arrange a correction visit. This workmanship support does not replace the manufacturer warranty and does not cover misuse, new damage, unauthorized changes, or faults unrelated to the installation.

How to escalate a concern

- Start with customer support and provide the service-record number, product, date, and a clear description of the concern.
- If the issue is not resolved, request review by the Service Supervisor. Include photographs or video when they help explain the problem.
- For an immediate electrical, fire, gas, or water hazard, switch off the product when safe, move people away, and contact the appropriate emergency or qualified safety service.

Test question	Approved answer in this guide
How quickly is a booking confirmed?	Normally within 2 business hours after complete information is received.
When should I reschedule?	At least 4 hours before the appointment whenever possible.
How long is workmanship support?	Report the same installation workmanship issue within 14 calendar days.
Will you repair without my approval?	Paid repair work begins only after the customer approves the estimate.

Keep your receipt, appointment confirmation, estimate, and final service record. These documents help the chatbot and staff give accurate support.
