Status	Approved fictional business information

1. Warranty coverage and periods

Purpose. The warranty supports customers when a product fails because of a manufacturing defect during normal household use. It is separate from the 30-day return policy and may continue after the return period ends.

Warranty start date. Coverage begins on the purchase date or confirmed delivery date, whichever is later. A replacement product continues for the remaining original warranty period or 90 days from replacement, whichever is longer.

Standard periods. SmartBlend blenders, kettles, irons, and similar small appliances have a 12-month manufacturer warranty. Televisions and CoolHome refrigerators have a 24-month manufacturer warranty unless the receipt states a different approved period.

Proof of coverage. The receipt, invoice, online order record, or verified payment reference establishes the product, serial number, purchase date, and warranty period. Customers should keep these records.

Geographic scope. Products purchased from Kigali HomeTech receive support through the Kigali service desk. Service outside Kigali may involve transport arrangements and additional travel time.

Example: A SmartBlend 500 purchased eight months ago remains within its 12-month warranty. A television purchased 20 months ago remains within its 24-month warranty.

Page topic	2. Faults and services covered
Status	Approved fictional business information

2. Faults and services covered

Manufacturing defects. Coverage includes faults caused by defective materials, assembly, electrical components, controls, motors, compressors, displays, or internal wiring when the product was used correctly.

Performance failure. A product that cannot perform the main function described in its manual may qualify. Examples include a blender motor that does not start, a refrigerator that cannot cool to the normal range, or a television display that fails without impact damage.

Parts and labour. Approved warranty repair includes the necessary replacement parts and technician labour. The store or authorized service partner chooses parts that meet the manufacturer specification.

Repair, replacement, or refund. The first solution is normally repair when safe and practical. Kigali HomeTech may replace the product if repair is impossible, parts are unavailable, or repeated repair has not solved the fault. A refund may be considered when neither repair nor replacement is reasonable.

Transport. For confirmed faults in large appliances within Kigali, the store may arrange inspection or collection. Customers should follow support instructions to avoid further damage.

Accessories. Accessories supplied with a product are covered only when the failure is a manufacturing defect. Consumable items such as filters, batteries, bulbs, and blades may have shorter coverage or may be excluded.

Warranty approval requires evidence of a fault, not simply customer dissatisfaction. Staff should distinguish a defective product from incorrect setup, expected operating noise, or change of mind.

Page topic	3. Exclusions and customer responsibilities
Status	Approved fictional business information

3. Exclusions and customer responsibilities

Accidental damage. Cracked screens, dents, broken jars, liquid entry, fire, lightning, and damage caused by dropping are not manufacturing defects.

Power conditions. Damage from incorrect voltage, unstable power, lightning, an unsuitable extension cable, or lack of recommended surge protection is excluded unless a technician confirms an internal manufacturing fault.

Misuse and poor maintenance. Coverage does not include overloading, blocked ventilation, operation without required water or ingredients, failure to clean filters, pest damage, rust caused by improper storage, or use outside the manual instructions.

Unauthorized service. Opening the product, altering wiring, replacing parts, or using an unauthorized repairer may end coverage for damage connected to that work. Customers should contact support before repair.

Commercial use. Products sold for normal household use may have limited or no coverage when used continuously in restaurants, hotels, workshops, or rental businesses.

Customer preparation. Before submitting a claim, customers should back up personal data, remove passwords where possible, clean the product, and return requested accessories. Kigali HomeTech is not responsible for data loss during repair.

An exclusion must be supported by inspection evidence. Staff should not reject a claim merely because a product has cosmetic wear that is unrelated to the reported fault.

Page topic	4. How to submit and track a claim
Status	Approved fictional business information

4. How to submit and track a claim

Information required. The customer provides proof of purchase, product model, serial number, contact details, a clear description of the fault, and when the fault began. Photos or a short video can help with visible or intermittent problems.

Initial checks. Support may guide the customer through safe checks such as confirming power, resetting controls, checking ventilation, or reading an error code. The customer should not dismantle the product.

Claim registration. Staff create a warranty reference number and record the product condition and accessories received. This reference is used for updates and collection.

Assessment time. Initial assessment normally takes up to five business days after the product reaches the service point. Complex faults or unavailable parts may take longer. Staff should inform the customer when the expected date changes.

Claim status. Status may be received, under assessment, awaiting approval, awaiting parts, repaired, replacement approved, ready for collection, or closed.

Collection. The person collecting a repaired or replacement product should present the warranty reference and identification or provide written authorization.

Customers should quote the warranty reference number when asking for progress. Chatbot answers may explain statuses but should not reveal a customer claim without identity verification.

Page topic	5. Repair outcomes, repeat faults, and support
Status	Approved fictional business information

5. Repair outcomes, repeat faults, and support

Successful repair. The customer receives a repair summary describing the confirmed fault and work completed. The customer should test basic operation at collection when practical.

No fault found. If testing does not reproduce the problem, staff explain the checks completed and may request more detail or a video. A diagnostic fee may apply only when the customer agreed in advance and the case falls outside warranty.

Repeat fault. A customer should report the same fault promptly with the earlier repair reference. Repeated failure after reasonable repair attempts may support replacement or another remedy.

Replacement. A replacement should have equivalent or better essential specifications. Colour or minor design details may differ when the original model is unavailable.

Uncollected products. Staff contact the customer when service is complete. Products not collected after repeated notice may incur reasonable storage arrangements described to the customer in writing.

Support channels. Customers can visit the Kigali HomeTech service desk or use the official support contact shown on their receipt. Important safety faults, smoke, burning smell, or exposed wiring should be reported immediately and the product should remain unplugged.

Warranty summary: confirm coverage period, verify proof of purchase, identify the reported fault, check exclusions, register the claim, and communicate the assessment outcome.
